

# PolySnap<sup>®</sup> Adapter Strips

**PipeTop™ Adapter Strip**

**Channel Adapter Strip**

**Angle Iron Adapter Strip**

**DESCRIPTION**

Your original PipeTop™ frame is still in serviceable condition and you are not in a position to spend the money to upgrade your entire screen deck structure to the newer PipeTop II™. Or, your existing channel-style deck frame fits your application requirements quite well. In either case, you are keeping your existing frame but want to enjoy the many advantages of Polydeck's PolySnap® fastening system.

**BENEFITS**

We offer several styles of adapter strips that attach to your existing frame type in order to allow the use of PolySnap® adapter pins. The result is a minimal investment while enabling you to convert to PolySnap® screen panels - our innovative fastening system that is unique in its ability to lock in panels both horizontally and vertically, while still allowing ease of installation and removal. Another benefit of the adapter strips is the added layer of protection that each provides to the frame itself.

**OPTIONS**

**Adapter Strips - PipeTop™:** These 12" long polyurethane strips convert an older style PipeTop™ frame to accept PolySnap®-style screen panels. They are only available in a 2-pin-per-foot option.

**Adapter Strips - Channel:** These polyurethane strips come in 3 styles - a 12" long section with either 2-pin-per-foot or 3-pin-per-foot versions for use in a standard channel frame and a 10" long/3-pin-per-foot version for use in channel grid frames.

**Adapter Strips - Angle Iron:** This 3/8" thick, 3" wide polyurethane strip is designed for use on angle iron with 23mm holes.

Each style of adapter strip is designed to be used with PolySnap® adapter pins. These pins come in 4 styles - standard head and standard head with an extended shank as well as large head and large head/extended shank.
