

PolySnap® Fastening System

DESCRIPTION The PolySnap® fastening system was developed to further simplify the process of installing and removing Polydeck screen panels. The system consists of polyurethane inserts that screw into the threaded ferrules on our PipeTop II™ frame. The head of the insert has a pyramidal shape that snaps into the molded opening on the bottom of the screen panel frame.

BENEFITS The PolySnap® fastening option adds versatility to the PipeTop II™ frame system by fitting into the same ferrule openings used for pin-style inserts. By simply switching from a pin-style to a PolySnap® insert or vice versa, either style screen panel can be used to utilize the option that best suits a specific application. The unique construction of the PolySnap® insert provides outstanding horizontal and vertical holding power to ensure secure fastening, even in demanding conditions.

OPTIONS Our PolySnap® fastening system option is available in 1' by 1' or 1' by 2' polyurethane or 1' by 2' rubber screen panel options. For the most aggressive applications like high tonnage scalping, a large head PolySnap® insert is available to offer even greater holding power.

A special tool is available that fits into a 1/2" drill chuck, to make installation and removal of the threaded inserts a quick and simple operation.
